

TEXT INSPECTION ARTWORK INSPECTION BARCODE VERIFICATION

A release process of absolute excellence requires the elimination of all human error.

MENHIR PHARMA DESIGN provides the best certified technology for the electronic inspection of texts, artwork, and barcodes.

Our tried and tested inspection systems are used every day during the preparation and analysis phases of processing.

Costs even for single electronic comparisons and barcode verification are now available on our price list.

Why risk a mismatch between press-ready graphics and the editor's copy, or between ap-

proved artwork and the version processed by the printer?

Why risk creating ISO or GS1 barcodes that cannot be scanned by the distribution chain?

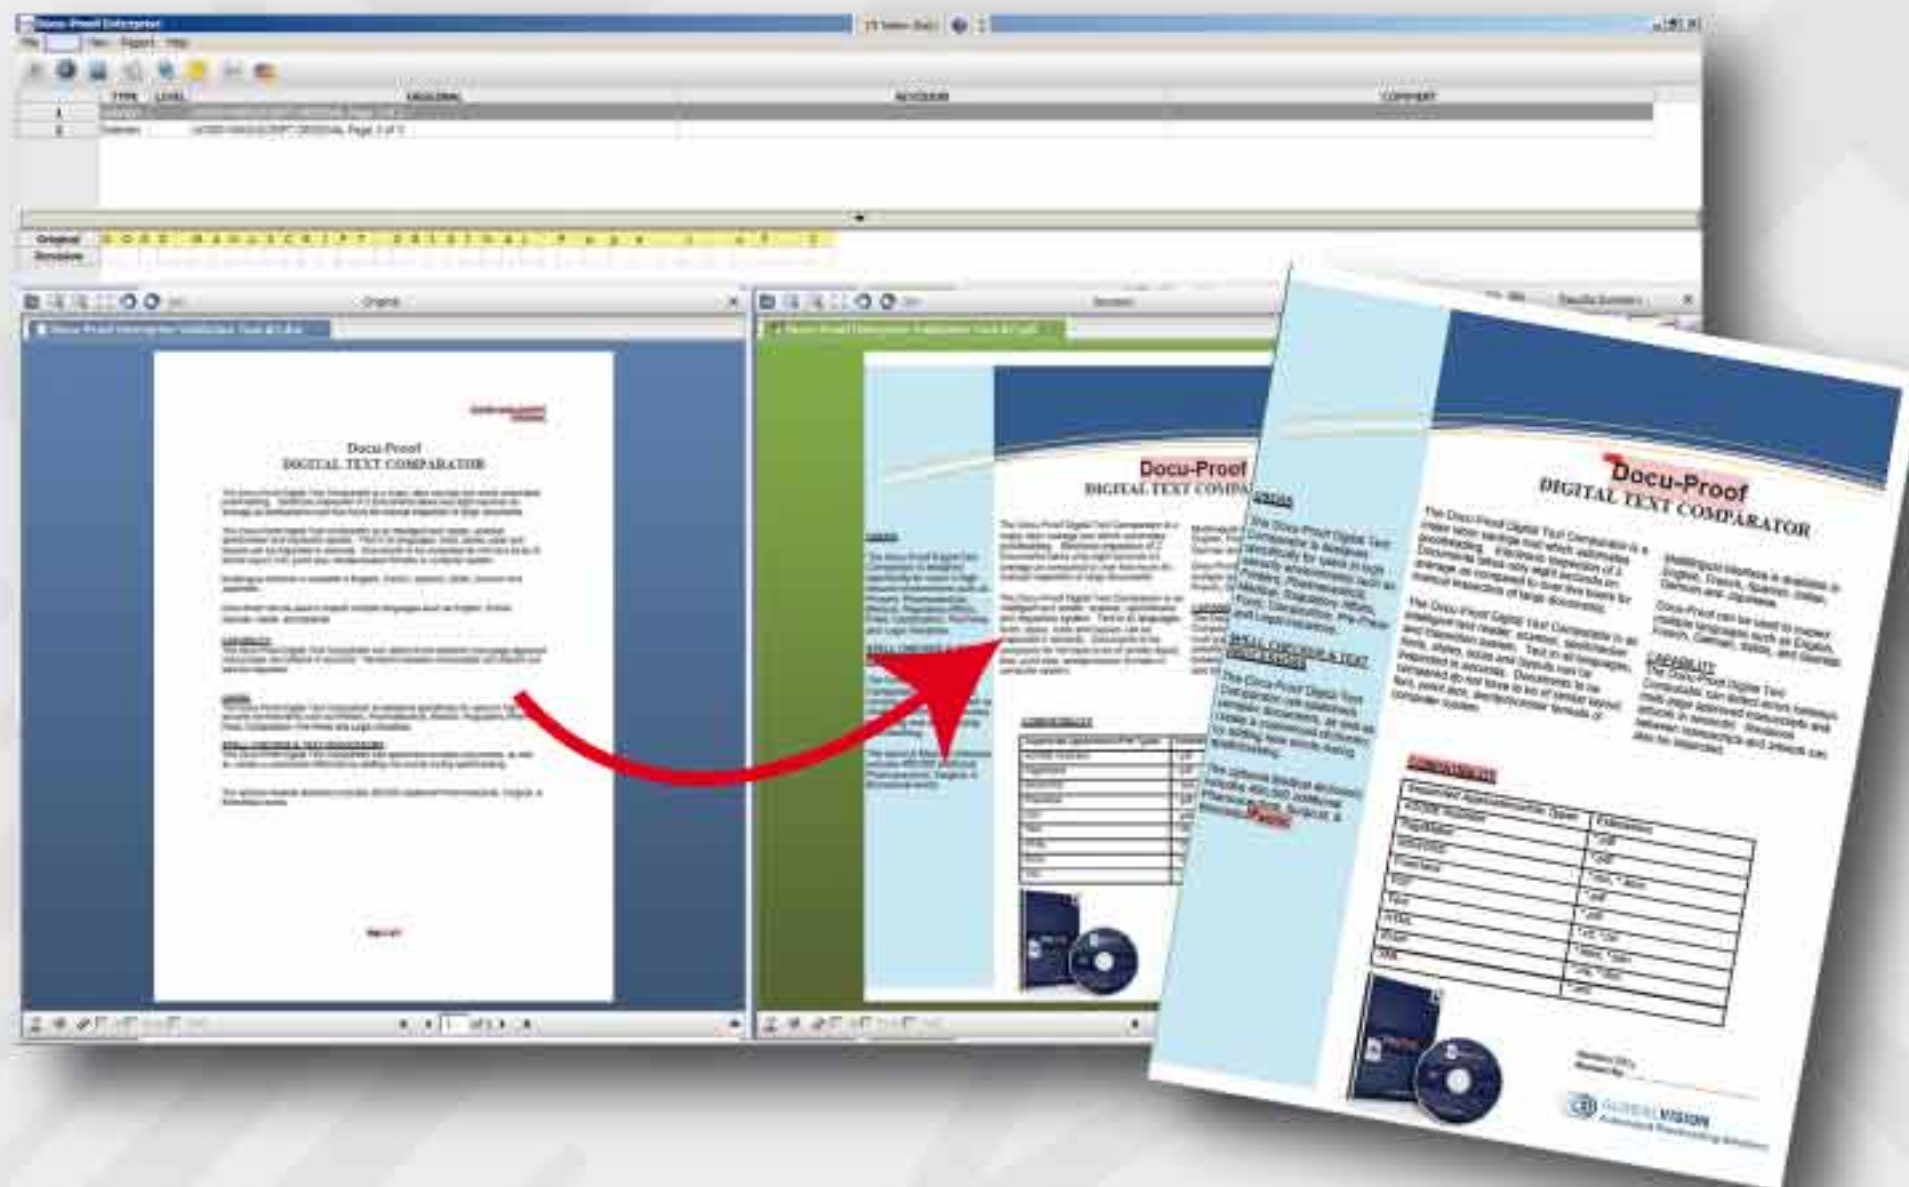

Upon receipt of your files we inspect them and, both rapidly and at a very reasonable cost, we can provide you with a verification report certifying the compliance of your internal or outsourced processes.

TEXT INSPECTION WITH DOCU-PROOF FROM GLOBAL VISION INC.

The inclusion of sworn texts or editor's copy in illustrative sheets, or on packaging or labels, requires a quality-control process of absolute precision. Checking by sight alone can be very risky, due to inevitable human error.

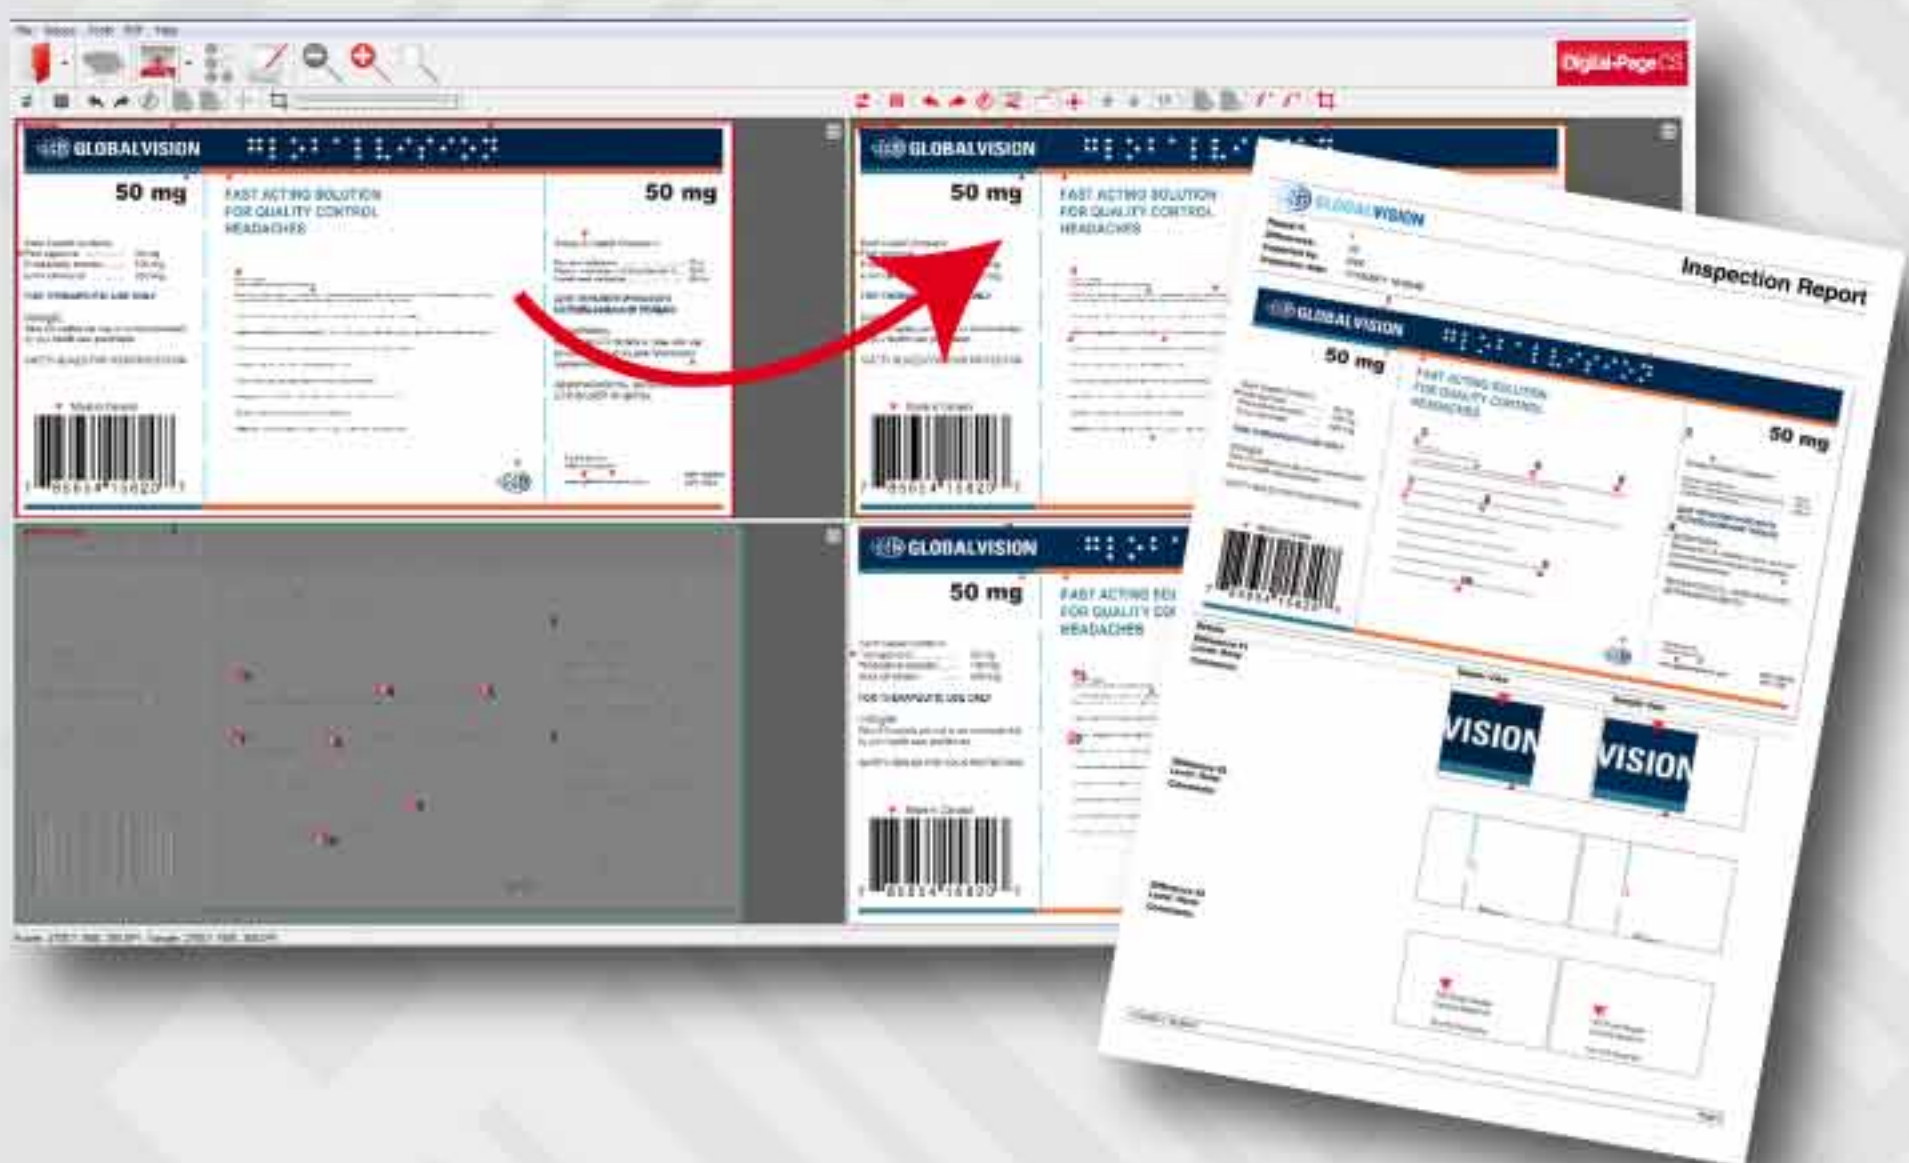

By using the Docu-Proof system from Global Vision Inc., we make an electronic comparison between the Word file and the PDF artwork, indicating any differences there may be and issuing a verification report as certification of conformance.

ARTWORK INSPECTION WITH DIGITAL PAGE FROM GLOBAL VISION INC.

When artwork is modified, we need to be absolutely sure that all the changes requested have been made, but especially that no graphic element has been removed or accidentally added.

After final approval, the PDF artwork is delivered to the supplier, who modifies it to create the final press sheet. Using Digital Page software developed by Global Vision Inc., we make a digital comparison between the master artwork and the reprocessed artwork, detecting every slightest discrepancy. At the end of the test, we issue a detailed inspection report as a document of conformance.

BARCODE VERIFICATION WITH LVS INTEGRA 9500 HARDWARE AND SOFTWARE

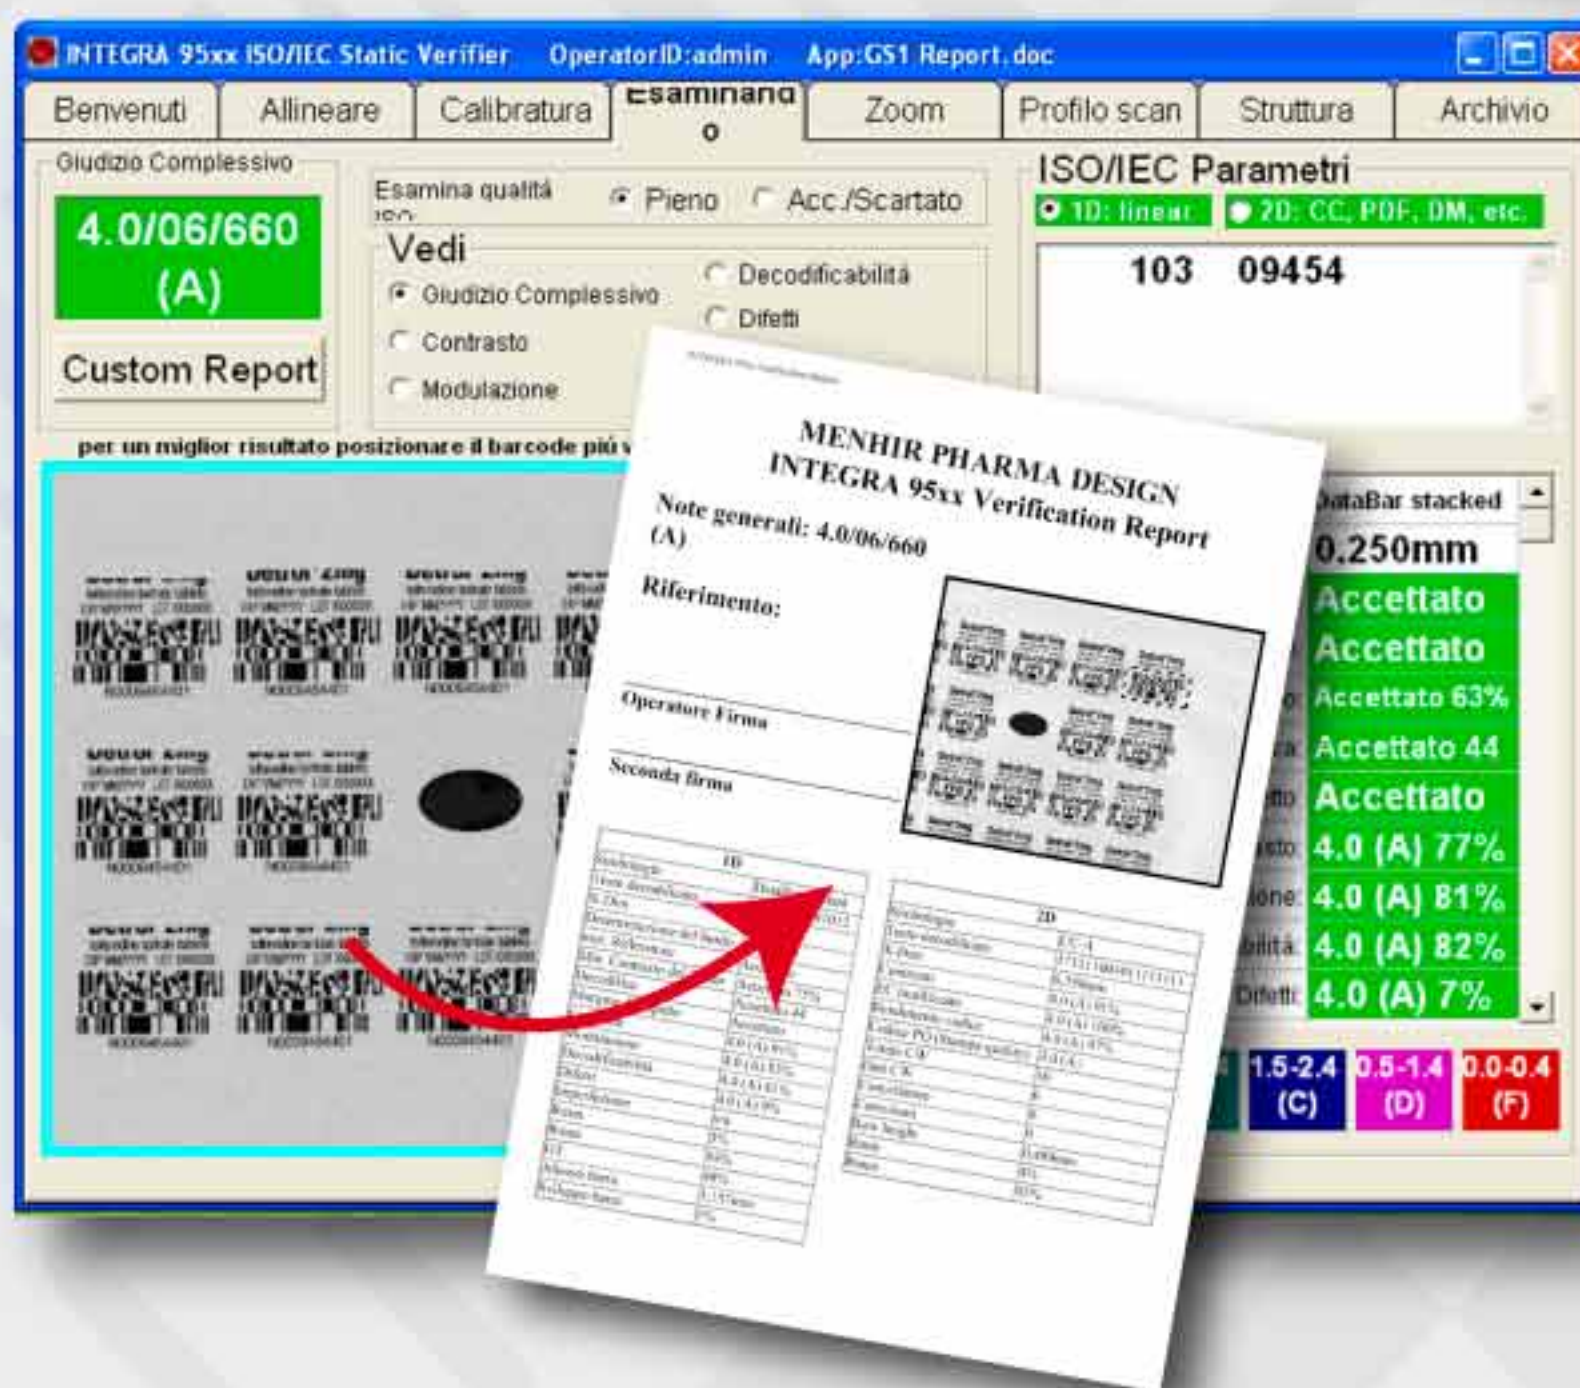

A barcode that cannot be scanned can cause snags in the distribution of a product.

Quality is a serious issue, especially if the barcode is particularly small or printed on special materials.

MENHIR PHARMA DESIGN uses the advanced LVS system to verify the grade level (Grade A, B, C, D, F), in compliance with ANSI/CEN/ISO regulations and GS1 specifications. With our verification report, you can now guarantee the quality of your barcodes.
